                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                  18
                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABR2072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

```
The present sequence represents a canine obese (OB) protein variant which lacks Gln28, with respect to the full length sequence (AAW31741). A variant which possesses a N-terminal Met residue in place of the leader sequence (AAW317096) also exists. The OB protein activity results in a decrease in body fat. The canine OB protein can be used for treating dogs who suffer from, e.g. obesity, type II diabetes, elevated blood lipid levels, or to increase lean body mass. They can also be used for e.g. increasing insulin sensitivity, increasing red blood cells (and oxygenation in the blood) and decreasing bone resorption or osteoporosis. The products can also be used for diagnostic purposes, e.g. for characterising or detecting defects in canine OB genes or gene products. note: this sequence does not appear in the specification; it was created
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated canine obese (OB) protein and related DNA - used to develop products for treating dogs for e.g. obesity, type II diabetes, elevated blood lipid levels or for increasing lean body mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at trip. seqdata uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, increased resistance to plant disease, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert interped.
                                                                                                                                                    New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAGB1454 to AAGB3120, from Staphylococcus epidermidis. (I) and have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which expess the polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to other inhibitors of their activity and therefore identify compounds that may be used for the cativity and therefore identify compounds that may be used for the cativity and therefore identify compounds that may be used for the cativity and therefore identify compounds that may be used for the cativity and therefore identify compounds that may be used for the cativity and therefore identify claimed S. epidermidis genomic DNA DOLYMUCLECTION (AAH5509) to AAH55090 represent specificatiny claimes from the present invention. AAH55091 to AAH55098 cempresent collisonate from the present invention, Nowever the sequence listing of the present invention, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are given
                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistence; galactomannan production; lighn production; plant growth regulator; yield; plant growth; plant development; seed oil; protein yield;
                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
              Nucleic acids encoding polypeptides from Staphylococcus epidermidis, useful for vaccinating against infections, e.g. endocarditis.
                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the sequence. Here for the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ESESSION
                                                                                                                                                                                         The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant till length insert in the recombinant DNA construct of the

the following and the following the vector; (3) an isolated considered to the following the following the vector; (3) an isolated considered the following and the following a gene product or that has an activity against a biological pathway to which a proliferation, for that inhibits proliferation of an identifying a gene compound that inhibits proliferation of an organism acts; (9) manufacturing an antibicit; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene compound's activity; (11) a culture comprising strains in which the compound the target of a compound that inhibits the extent of the strains is present in a culture or collection of a crains, or (13) identifying the target of a compound that inhibits the extent of the strains is present in a culture or collection of a strains; or (13) identifying the target of a compound that inhibits collection of a fortile or strains in the action of an organism. The antisense nucleic acids required for collection of for collection of the collec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                           New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention relates to an isolated nucleic acid comprising any one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance;

                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in nelectronic form from the US patent office at available in electronic form from the US patent office at the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme semotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, ignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert plantenion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                          New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for improving yield.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed considers in diagnostics as expressed sequence tags for identifying expressed considers in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a cupplement. (II) and its binding partners are useful in medical imaging consupplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). In are useful for treating disorders of supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). In are useful for treating disorders of involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in cations of sequences of the invention. Note: The sequence data for this maint acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in catetronic format directly from WHDO at cat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vaccine; urinary tract infection; bacteraemia; endocarditis; wound; abdominal-pelvic infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrochermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110 degrees centigrade. Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436
                                                                                                                                                                                                                                                             New nucleotide sequences isolated from Pyrococcus abyssi encode proteins useful in industry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunogenic protein; Toxoplasma gondii protein; oocyst shedding; cat;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid derived from
Enterococcus faecium encoding an Enterococcus faecium polypeptide having
One of 10 fully defined sequences given in the (or comprising 40
sequential nuclectides chosen from any of the nucleic acids, its
complement or sequences hybridising to it). Also included are a
recombinant vector comprising the nucleic acid operably linked to
transcription regulatory element, a cell comprising the vector and a
single-stranded probe comprising the nucleic acid. The nucleic acids are
chosen from 3654 disclosed sequences encoding 3654 disclosed proteins.
The nucleic acids is useful for diagnosing pathological conditions
resulting from E. faecium bacterial infection (e.g. urinary tract
infection) bacteraemia, endocarditis, wounds and abdominal-pelvic
infection) and for screening drugs such as agonists and antagonists. The
nucleic acid is useful for recombinant production of candida albicans
derived peptides or antiense polypeptides. Pharmaccutical compositions
and vaccines containing the nucleic acid are useful for preventing or
treating Enterococcus faecium infections. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to detection of parasite oocysts or cysts in a faeces sample comparising contacting the sample with a sollid support, drying and then washing the sample with an aqueous wash solution, adding an aqueous elution solution and eluting DNA from the sample by heating and amplifying by PCR oocyst/cyst-specific DNA and detecting the amplification products. The method is useful for detecting parasite oocysts e.g., enteric apicomplexa oocysts such as Cryptosporidium oocysts or Toxoplasma oocysts, or for detecting parasite cysts e.g. diardia cocysts. The method is also useful for developing vaccines to prevent oocyte shedding in cats. The present sequence represents an immunogenic protein from Toxoplasma gondii
                                            The invention provides isolated Toxoplasma gondii nucleic acids that encode immunogenic polypeptides. The T. gondii nucleic acid molecules, immunogenic proteins and antibodies to the proteins can be used to inhibit T. gondii occyst shedding in a cat due to infection with T. gondii. They can be used for preventing T. gondii infection and for preventing the spread of T. gondii infection. They can also be used for detecting T. gondii infection. They can be used for parasite cysts or occysts in feces, e.g. from enteric apicomplexa occysts such as Cryptosporidium occysts and Toxoplasma occysts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detecting parasite occysts or cysts in feces, comprises eluting DNA from sample into aqueous solution by heating, amplifying DNA with primers specific for occysts or cysts being detected, and detecting amplification
                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunogenic protein; oocyst; faeces; enteric apicomplexa oocyst;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated Toxoplasma gondii protein. The protein is useful for inhibit oocyst shedding by cats infected with Toxoplasma gondii. The protein is useful for preventing or ameliorating diseases caused by infection with T. gondii. The nucleic acid can be used as genetic vaccine which encodes the protein. The protein and the nucleic acid are used as diagnostic reagents for detection of T. gondii infection. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel immunogenic Toxoplasma gondii proteins useful for inhibiting oocyst shedding by cats infected with Toxoplasma gondii.

                                                                                                                                                                                                                                                                                                                                                                                                                                         AAA79263 to AAA79736 and AAB25100 to AAB25570 represent polymucleotide
and protein sequences isolated from eucalyptus (Eucalyptus grandis) or
pine (Pinus radiata also known as Monterey pine). The protein sequences
are involved in cell signaling. The polymucleotide and protein sequences
can be used to modify the response of plant cells to external signals
c. 9. environmental changes or pathogens during the growth and development
of a plant. They can be used to modify cell proliferation,
differentiation, elongation and survival, resistance to disease and
nutrient metabolism. Examples of modifications which can be produced are
altered fruit ripening and sensecence of leaves and flowers e.g. to delay
sensescence and prolong the life of cut flowers or enhance sensescence of
reproductive organs to engineer sterile plants. Other modifications can
be used to delay senescence in selected cell types or organs providing
consumption, or to decrease branching frequency in forest tree species
giving long stretches of valuable knot-free clear wood which can be used
in solid timber furniture and veneers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% to 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morphid states. They are also useful for treating osteoprosals, neurological diseases, Alzhaimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a protein
Novel 2495 cDNA, useful for treating osteoporosis, neurological diseases Alzheimer's diseases, Parkinson's diseases, dementia and various cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         XFXBXFXFXFXFX
                                                                                                                                                                The invention relates to an isolated nucleic acid molecule encoding a Schistosoma mansoni protein, or its portion which is at least 20 amino acid state. As included are an expression vector comprising the nucleic acid operably linked to a promoter, a recombinant cell transformed/transfected with the nucleic acid in combination with a pharmaceutical adjuvant or carrier, an isolated s. mansoni protein composition comprising the nucleic acid in combination with a pharmaceutical adjuvant or carrier, an isolated S. mansoni protein composition composition comprising the isolated S. mansoni protein, an isolated antibody which specifically binds to the isolated S. mansoni protein, a hybridoma cell line which produces the isolated antibody, a method for determining a S. mansoni infection in a subject and a computer readable medium having recorded in it a nucleic acid molecule from S. mansoni genome. The nucleic acid molecule is useful for preventing, diagnosing, or treating S. mansoni infection (schistosomiasis). It can also be used as vaccine against S. mansoni. The present sequence is a solistosoma mansoni protein of the invention. Note: The sequence data for the printed specification, but was the control of the printed specification, but was the control of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance, heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; galactomannan production; lignin production; plant growth regulator; yield; plant growth, plant development; seed oil; protein yield;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent of office at the sequence of the sequence. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomanna, lighnin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of homologous photosynthesis or carbohydrate, mitrogen or phosphorus use and/or uptake the property of the coll of the coll of the contained of the contained of the coll of the contained of the contained of the contained of the contained of the coll of the contained of the contained of the coll of the coll of the contained of the contained of the coll of the coll of the contained of the coll of the col

a promoter positioned to provide

Goldman BS;

```
The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for axpression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant construct and growing the transforming a plant with the recombinant DNA construct and growing the transforming a plant with the polynucleotide or polypeptide is useful for improving plant properties.

The recombinant DNA construct is useful for improving plant with the improved plant properties, e.g. improved cold, heat or drought tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, conterns to herbicides, extreme osmotic conditions, pathogens or perts, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plants production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the printed specification but was obtained in electronic form at the printed specification but was obtained in electronic
                                                                                                                                      for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 5; DB 8; Length 245;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  THE STATE OF THE S
                                                                                                                                                                                                                                                      The invention relates to an isolated mucleic acid molecule encoding a channel/transporter protein or sequences at least 95% identical to a these. The mucleic acids and proteins encoded by them are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used to prevent, treat or ameliorate a medical condition or susceptibility to a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic in alleviating symptoms associated with the disorders and in diagnostic (ELISA). Disorders which are diagnosed or treated immunosorbent assays (ELISA). Disorders which are diagnosed or treated immunosorbent assays communosassays e.g. rheumatoid arthritis, hyperproliferative disorders e.g. creations are expressed include autoimmune companies of the breast or liver, cardiovascular disorders e.g. carchiac arrest, cerebrovascular disorders e.g. Alzheimer's disease, infections caused by carcell proliferation, to prevent skin aging due to sunburn, to maintain cell proliferation, to prevent skin aging due to sunburn, to maintain corgans before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used to see used to a protein of the encoder expense archiac successions archiac successions archiac succession of the sequence corresponds to a protein of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                           The invention relates to very long chain fatty acid (VLFA) biosynthesis enzymes (VLCFABB) and polynucleotides encoding such proteins. Sequences of the invention are useful for treating VLCFABB diseases such as noninsulin dependent diabetes mellitus (NIDDM), adrenoleukodystrophy (ALD), autosomal dominant macular dystrophy (aMDM), Alzheimer's disease and coronary heart diseases such as stroke and myocardial infarction. They are also used in gene therapy. The present sequence is human VLCFABB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotific condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; galactomannan production; lignin production; plant growth regulator; yield; plant growth; plant development; seed oil; protein yield;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for improving yield.
New isolated nucleic acid molecule comprising a very long chain fatty acid biosynthesis enzyme nucleic acid, useful for treating a disease associated with the biosynthesis enzyme nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .;

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an anino acid sequence available in electronic form from the US patent office at available in electronic form from the US patent office at the sequence. The sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lighn or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert is polypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

(asparaginy) beta-hydroxylase (AAH). The invention also relates to an isolated nucleic acid molecule comprising a sequence encoding a human antibody or its fragment or other variant, where the antibody, the ragment or the other variant specifically binds to human AAH (HAAH), an expression vector comprising the nucleic acid molecule, a host cell comprising the expression vector, a method of modulating an AAH activity in a cell, a method of treating a patient who has a cancer associated with overactive or over expressed AAH, a method for identifying an antibody or its fragment or other variant that specifically binds to an AAH and a method of making a human monoclonal antibody or its fragment or other variant that specifically binds to an AAH. The composition, antibody, nucleic acid, kit and methods are useful for diagnosing or treating cancer, where the cancer cell is a tumor cell of the lung, liver, colon, pancreas, prostate, ovary, bile duct, brain or breast. This sequence represents an anti-HAAH single-chain FV antibody fragment used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            rice; post-transcriptional gene silencing; PTGS; plant; trans-activation;

polymucleotides that are modulated by post-transcriptional gene silenting polymucleotides that are modulated by post-transcriptional gene silenting plants via PTGS and the trans-activation of homologous genes due to increased RNA degradation. The present invention describes clusters of polymucleotides from cereals, in particular rice, as well as homologues and the polypeptide sequences derived thereof, where gene expression is altered in response to PTGS. As such, the elucidation of gene silencing mechanisms can lead to more efficiently expressed transgenes, and can also improve the understanding of plant-viral interactions and targeting the suppression of specific plant genes. This polypeptide sequence is a rice protein sequence that is modulated by gene silencing, given in an exemplification of the invention. NOTE: This sequence does not appear in the printed specification but has been obtained in electronic format from the grant of the contraction of contraction o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New stress-responsive nucleic acid, useful for altering the responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold stress, salt stress or osmotic stress.
                                                                                                                polynucleotide, useful for modulating gene expression within a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     abiotic stress tolerance; transgenic plant; plant; cereal; agriculture.
                                                                                                                                                                                                                                                    This invention relates to a novel method for identifying isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rice abiotic stress responsive polypeptide SEQ ID NO:6962.

Specifically, it refers to the regulation of gene expression in plants via PTGS and the trans-activation of homologous genes due to increased RNA degradation. The present invention describes clusters of polyuncleotides from cereals, in particular rice, as well as homologues and the polypeptide sequences derived thereof, where gene expression is altered in response to PTGS. As such, the elucidation of gene silencing mechanisms can lead to more efficiently expressed transgenes, and can also improve the understanding of plant. viral interactions and targeting the suppression of specific plant genes. This polypeptide sequence is a rice protein sequence that is modulated by gene silencing, given in an the printed specification but has been obtained in electronic format from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  rice; post-transcriptional gene silencing; PTGS; plant; trans-activation; cereal; plant-viral interaction.

    polynucleotide, useful for modulating gene expression within a cell
posttranscriptional gene silencing.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rice protein modulated by post-transcriptional gene silencing SeqID 76.

in threating it actual to mover autor, estimate appearance and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide. The nucleic acid molecule and the polypeptide encoded by it are useful in altering the responsiveness of a plant to an abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence is used in the exemplification of the invention
                                                                      The invention relates to novel abiotic stress responsive polynucleotides

New antisense nucleic acids, useful for identifying proteins or scre for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

N-PSDB; ACA47469.

Claim 25; SEQ ID NO 71523; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense

multiple activity of a most cent containing the Vector; (4) an intolated by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular continuous producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for cellular proliferation; (8) identifying a compound that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway required for proliferation. Or that inhibits cellular proliferation of an identifying a gene required for cellular proliferation of an identifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene or which the test compound that inhibits profileration of an organism. The antisense nucleic acids required cor expressed or underexpressed; (12) determining the extent compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound's activity; (13) a culture compound that inhibits the product is overexpressed or underexpressed; (12) determining the extent compound that inhibits the proliferation of an organism. The antisense nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, CC drug discovery programs, or for screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, CC drug discovery programs, or for screening to the printed source is encoded by one of the target prockaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at Length 280; Sequence 280 AA; Query Match %\$

Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.

Disclosure; SEQ ID NO 30991; 455pp; English

```
The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant opponents for diagnosis and/or treatment of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-derived peptides or polypeptides, as target infection, and in detection of P. aeruginosa sequences or other sequences of pseudomonas species using biochip technology. Sequences ABO67826-ABO8436 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed sequence of processing the printed sequence data for this patent did not form part of the printed sequence of processing the printed sequence of the printed seque

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides, expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a
prostate cancer, cervical cancer, pancreatic cancer, colon cancer, ovarian cancer, stomach cancer, oesophagus cancer, mouth cancer, tongue cancer, gum cancer, skin cancer, muscle cancer, heart cancer, bronchial cancer, cartilage cancer, bone cancer, testis cancer, kidney cancer, lymphoma cancer, ucerus cancer, bladder cancer, bone marrow cancer, lymphoma cancer, spleen cancer, thymus cancer, brain cancer, neuron cancer, gall bladder cancer, collar cancer, brain cancer, neuron cancer, lymphoma, leukaemia, mesothelioma, lymphoma, leukaemia, melanoma, squamous cell carcinoma, osteosarcoma, and Kaposi's sarcoma. The present sequence is a protein shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Tumour-associated antigenic target (TAT) polypeptide PRO70290, SEQ:2762.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human tumour-associated antigenic target (TAT)

TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder acancer, pancreatic cancer, critical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence represents a TAT polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel purified or isolated Cryptococcus neoformans nucleic acid molecule comprising a sequence encoding a polypeptialed comprising a sequence not given in the specification. A polymucleotide of the invention has fungicide activity, and may have a use in gene therapy. The nucleic acid is useful for preparing a composition for treating an infection caused by Cryptococcus neoformans. The present sequence represents a C. neoformans sequence of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pat_sequences.
                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid, useful for preparing a composition for treating an infection caused by Cryptococcus neoformans.

The invention features a teconomization was constitute completely as a teconomization of 5544 amino acid sequences (CDNAs SEQ ID NO: 5554.) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5555-11089). The CDNAs and proteins are from corn, soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region of the collypeptide associated with the property, and growing the transformed collypeptide associated with the property, and growing the transformed collypeptide associated with the property, and growing the transformed complaining growth rate in plant colls by modification of the cell cycle pathway, for improving plant tolerance, for production, for production of plant growth regulators, for ingroving plant tolerance to herbicides, for increasing the rate of complaining plant tolerance to herbicides, for increasing the rate of plant tolerance to extreme compute for ingroving plant tolerance to extreme compute for ingrovement by modification of plant tolerance to extreme compute for ingrovement by modification of plant colerance to extreme compute for ingrovement by modification of conditions, for improving plant tolerance to pathogens or pests, for yield improvement by modification of conditions and/or content, for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by providing improvement polyment under at least one stream conditions are conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and genetics, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen
                                                                                                                                           Plant; transgenic; cold tolerance; growth rate; drought tolerance; disease resistance; galactomannan production; plant growth regulator; heat tolerance; herbicide tolerance; lignin production; extreme osmotic condition tolerance; pathogens resistance; pest resistance; yield improvement; seed oil yield; seed protein yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     development under at least one stress condition. The polynucleotide may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention relates a recombinant DNA construct comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 2; SEQ ID NO 8095; 14pp; English.
                                                                                              Plant polypeptide, SEQ ID 8095.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       18-DEC-2003; 2003US-00739930.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28-APR-2003; 2003US-00424599

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Acinetobacter baumanii proteins and nucleic acids, useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for
flow, increasing plant tolerance to cold or heat, improving plant tolerance to extreme osmotic and drought conditions, and improving plant tolerance to plant pester or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant protein sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in sequence. Last of the printed Specification, but was obtained in sequence. Last of the printed by the SPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated Acinetobacter baumannii nucleic acids. The A. baumannii nucleic acids and polypeptides are useful as reagents for diagnosing a bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, to detect the presence of A. baumannii and other Acinetobacter species in a sample, in screening compounds for the ability to interfere with the A. baumannii life cycle or to inhibit A. baumannii infection, and as biocontrol agents for plants. The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                     Acinetobacter baumannii, bacterial disease; antibacterial; vaccine;

The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant thaving an improved property. The plant is a crop plant comprising an improved property comprises transformed plant with the recombinant DNA construct and growing the transformed plant with the recombinant DNA construct is useful for improving plant with the comprise or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with compressed resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased resistance to plant disease, better growth rate by modification of phosphorus use and/or uptake, by modification of carbohydrate, nitrogen or providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress providing improved plants, by modification of protocymthesis or by providing improved plants, by modification or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scome of the printed specification but was obtained in electronic form pat of the printed specification work of provident in the did not form the from used at a ment of the printed specification of pathods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                  Recombinant DNA construct; transformed plant; improved plant property;
                                                                                                                                                                                                                                         cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a recombinant DNA construct comprising a

Zhou P, Ma Y; Goodrich R, Chen R;

The invention describes a new isolated polynucleotide (I) encoding a polypeptide with biological activity comprising: a nucleotide sequence of that hybridization conditions; or a to the sequence having greater than 99% sequence that hybridization conditions; or a nucleotide sequence that hybridization conditions; or a nucleotide sequence having greater than 99% sequence identity with the sequence of (i). Also described are: a(i) (expression) vector comprising (i); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polynucleotide in the host cell; an isolated polypeptide comprising a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide of (i); and a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide of (i); and a sequence of SEQ ID NOS: 1-567, a composition comprising the polypeptide of (i); and a carrier; an antibody directed against the polypeptide of (i); and a carrier; an antibody directed against the polypeptide of (i); and a collection of polymucleotide for identifying a compound that binds to the polypeptide of (i); and a method for identifying a compound that binds to the collection of polymucleotides, where the collection comprising of at collection of polymucleotides, where the collection comprising of the sequences of SEQ ID NOS: 1-567 encoding a polypeptide with biological activity, which comprises any of the amino acid sequence of SEQ ID NOS: 1-567 encoding a polypeptide with biological sequences and methods are useful in diagnostics, forensic, and gene mapping, in identifying of mutuations responsible for genetic disorders or types of date and products dependent on DNA and amino acid sequences. The composition and method are useful for treating a disease or disorder, e.g. peripheral disease, Alzheimer, variance of a novel polypeptide of the invention. New polynucleotide encoding a polypeptide with biological activity, useful for treating a disease or disorder, e.g. osteoarthritis, burns, CNS and peripheral disease, stroke, autoimmune disorders, viral Claim 20; SEQ ID NO 916; 500pp; English.

New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics. disease resistance; galactomannan production; plant growth regulator; heat tolerance; herbicide tolerance; lignin production; extreme osmotic condition tolerance; pathogens resistance; pest resistance; yield improvement; seed oil yield; seed protein yield. Plant; transgenic; cold tolerance; growth rate; drought tolerance; Plant polypeptide, SEQ ID 6049. 18-DEC-2003; 2003US-00739930. 28-APR-2003; 2003US-00424599. 28-APR-2003; 2003US-00425115. WPI; 2004-757369/74. (KOVA/) KOVALIC D K. JS2004216190-A1. Viridiplantae. 28-OCT-2004. Kovalic DK;

Claim 2; SEQ ID NO 6049; 14pp; English.

The invention relates a recombinant DNA construct comprising a polymucleotide having any of 5544 nucleotide sequences (CDNAs SEQ ID NO: 51544) and encoding a polymeptide with any of 5544 and no acid sequences (GEQ ID NO: 5545-11088). The CDNAs and proteins are from corn, soybean, are fished by the companient of the sequences is derived from which organism. Also included is a method of sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a flant twith a recombinant DNA construct comprising a promoter region of functional in a plant cell operably joined to a polymucleotide encoding a plant with a recombinant DNA construct comprising a promoter region of property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant disease, for galactomannan production, for production of plant tolerance to plant disease, for ingroving plant tolerance to bathogous recombination in plants, for ingroving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake of photosynthesis, for modifying seed protein yield and/or content, for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by providing improved plant growth and for yield improvement by providing improved plant growth and for genetics, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improving plant tolerance to extreme osmotic and drought conditions, and improving plant colerance to plant pesses or pathogens. The methods and improving colerance to plant pesses or pathogens, and improving plant coleranc

                                                                                                                                                                             셤
                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 monocytogenes and related organisms, and for studying genetic monocytogenes and related organisms, and for studying genetic encoded by the genome sequence of the present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Dussurget C, Frangeul L, Couve E, Rusniok C, Faihi H, Dehoux P; Dussurget O, Chetouani F, Nedjari H, Glaser P, Kunst F, Cossart P; Daniels J, Goebel W, Kreft J, Kuhn M, Ng E, Vazquez-Boland JA; Dominguez-Bernal G, Garrido-Garcia P, Tierrez-Martinez A, Amend A; Chakraborty T, Domann E, Hain T, Berche P, Charbit A, Durant L; Perez-Diaz J, Baquero F, Garcia Del Portillo F, Gomez-Lopez N; Maduenio E, De Pablos B, Wehland J, Kaerst U, Entian K, Hauf J; Rose M, Voss H;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L.
analysis systems. The present sequence is one of the 5544 plant protein sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20040216190.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a nucleic acid molecule comprising a polynucleotide sequence or its complement that encodes a polypeptide. The nucleic acid is useful in preparing a composition for treating or preventing inflammatory, CNS, immune, bacterial or viral disorder, cancer, psoriasis, diabetes, early adjing, hormonal imbalance, ischemic heart disease or ulcerative colitis. This sequence corresponds to a

HUMAN GENOME SCI INC

```
The invention relates to an isolated nucleic acid molecule encoding a channel/transporter protein or sequences at least 95% identical to a these. The nucleic acids and proteins encoded by them are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, complete a pathological condition or susceptibility to a length a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic configurating symptoms associated with the disorders and in diagnostic (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. retainchassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. retainchassays or enzyme linked and ordinament of diseases e.g. created include autoimmune conceptuals and sorders e.g. corneal infections caused by carest, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial coll proliferation, to prevent skin aging due to sumburn, to maintain corgans before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease conversional invention of the incention of the incentio
                                                                                                                    Isolated nucleic acid molecule encoding a channel/transporter protein is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                     ô
                                                                                       The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  įs

New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the sequence. The sequence the DNA patent of the polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; pest tolerance; yield; plant growth, plant development; seed oil; protein yield; protein content.
sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

         increased resistance to plant disease, for producing galactomannan, lighin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polygeptide that can be used in the recombinant DNA construct of the

```

```
The present invention describes a crystal of protein kinase B beta (PKBbeta) comprising (1), where (1) comprises: (a) a tetragonal space group P4-12-12 and unit cell dimensions of: a = 149.33 plus or minus of strong P4-12-12 and unit cell dimensions of: a = 149.33 plus or minus of: 5 Angstrom, b = 148.40 plus or minus 0.5 Angstrom, b = 148.40 plus or minus 0.5 Angstrom, c = 38.55 plus or minus 0.5 Angstrom, a = 149.70 plus or minus 0.5 Angstrom, c = 39.19 plus or minus 0.5 Angstrom, or a = 149.70 plus or minus 0.5 Angstrom, c = 39.19 plus or minus 0.5 Angstrom, c = 39.19 plus or minus 0.5 Angstrom, c = 39.06 plus or minus 0.5 Angstrom, c = 39.19 plus or minus 0.5 Angstrom, c = 39.90 plus or minus 0.5 Angstrom, c = 39.06 plus or minus 0.5 C o.5 Angstrom, or (1) has cytostatic, antidiabetic, vasotropic, c notropic and neuroprotective activities, and can be used in gene the ergist of protein kinases activity, and for structural care useful in activating protein kinase activity, and for structural mulgais of other protein kinases. The crystal may also be used in malfacturing a medicament for treating cancers, diabetes, erectile dysfunction or neurodegeneration. The present sequence represents an AGC family protein kinase which is given in the exemplification of the
                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Protein kinase B; PKB/Akt; enzyme; crystal structure; drug discovery; protein co-ordinate data; cytostatic; andidabetc; vasotropic; PKB; nootropic; neuroprotective; gene therapy; protein kinase B beta; PKBbeta; structural analysis; cancer; diabetes; erectile dysfunction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New crystal of protein kinase B beta, useful for activating protein kinases, e.g. AGC kinases, comprises three-dimensional atomic coordinates

The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated protein complexes useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The invention relates to novel protein complexes comprising a first and a second protein, or its derivative, fragment, homologue or variant. The proteins are selected from given protein complexes, which are not defined in the specification. The variants are encoded by nucleic acids that the specification. The variants are encoded by nucleic acids that the specification of the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active useful as drugs targets for the treatment or preventing of a disease or disorder. The complexes and methods above are useful in diagnosing or for developing a disease or disorder in a subject. These are also useful in screening for the presence of a disease or disorder or a predisposition for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or disorder. The molecule that modulates the amount, activity or protein components of the complex is useful for the manufacture of a medicament
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      targets in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            for the treatment or prevention of a disease or disorder. This sequence corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was obtained from the EPO in electronic format).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant DNA construct; transformed plant; improved plant property;

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant cauch as maize or soybean. The method of producing a transformed plant cauch as maize or soybean. The method of producing a transformed plant can be a plant with the cacombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or persent increased rate of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modified seed oil or protein yield and/or content, improved yield by modification of photosynthesis or by providing improved plant growth and development under at least one stress content, in the call of the call development under at least one stress content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypoptide used in the scope of the invention. Note: The sequence data for this parent did not form part of the printed specification but was obtained in electronic

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway capable of specification, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway capable of the gene product or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an
                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                              ઢ
corganism acts; (9) manufacturing an antibiotic; (10) profilling a compound's activity; (11) a culture comprising strains in which the gene product is overszpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense mucheic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational crowing scrovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the trarget prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained cor the published pot_sequences.
                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antisense; prokaryotic essential gene; cell proliferation; drug design.

polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding che polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation, (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (1) a culture comprising strains in which the est compound that inhibits the ground is activity; (1) a culture comprising strains in which the strains is present in a culture or collection of the which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for the proliferation of an expension of an organism or screening for homologous nucleic acids required for the proliferation of an organism or for a condition of an organism or for a condition actids required for for cellular proliferation of an organism or for a condition actids are useful for the proliferation of an organism or for a condition actids are useful for the proliferation of an organism or solular candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. preumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fixed by the printed the fixed by the fixed at the fixed 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;

```
concing a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated pulpapptide whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular confideration or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway confideration, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation, or that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of product is overexpressed or underexpressed; (12) determining the extent of compound; a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of compound; a culture or collection of the strains is present in a culture or collection of the strains; or (13) identifying the target of a compound that inhibits the confidentifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. prequence does not prove the printed specification, but was obtained of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained for proliferation or an expanse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antisense; prokaryotic essential gene; cell proliferation; drug design.
      comprising a promoter operably linked to the nucleic acid

```
the invention relates to an isolated mucieto acid comprising any one of the nucleic acid inhibits proliferation of a cell. Also included are:

Co f the nucleic acid inhibits proliferation of a cell. Also included are:

Co of the nucleic acid inhibits proliferation of a cell. Also included are:

Co comprising a promoter operably linked to the nucleic acid

cnccling a polypeptide whose expression is inhibited by the antisense

nucleic acid; (2) a host cell containing the vector; (3) an isolated

Co polypeptide or its fragment whose expression is inhibited by the

antisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide of its fragment whose expression is inhibited by the

antisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide of its fragment whose expression is inhibited by the

antisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide of the activity of a gene in an operon required for

proliferation or that has an activity against a biological pathway

required for proliferation, or that inhibits cellular proliferation; (8)

identifying a gene required for cellular proliferation of the pathway in which a proliferation or that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling the extent

Co organism acts; (9) manufacturing an antibiotic; (10) profiling the extent

Co organism acts; (9) manufacturing an antibiotic; (10) profiling the compound that inhibits the compound section of an organism. The antisense nucleic acids are useful for the printerns or cellular proliferation to isolate compound that inhibits defined for proliferation in cells other than S. aureus, S. typhimurium,

Co dentifying proteins or screening for homologous nucleic acids activity arequired for proliferation in cells other than S. aureus, S. typhimurium,

Co patent did not forme part of the printed sequence is encoded by one of the view of the printed specification, but was obtained for the printed specif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antisense; prokaryotic essential gene; cell proliferation; drug design.

The invention relates to an isolated nucleic acid comprising any one or the face and an included and the face and an included are the face and an included are of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid comprising a promoter operably linked by the antisense conding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated containing the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular containsense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular containsense nucleic acid; (7) identifying a cellular proliferation, or that has an activity against a biological pathway in which a proliferation, or that inhibits proliferation; (8) identifying a gene required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound; activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of the present of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for cultular proliferation to isolate candidate molecules for rational contains, or for streening homologous nucleic acids for this credited for proliferation in cells other than S. aureus, S. typhimuring, credited for proliferation in collaboration and the present sequence is encoded by one of the trarget proversy programs, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                    New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                          Zyskind JW;

This invention relates to a novel isolated DNA sequence which comprises a promoter or a promoter fragment of a mycobacterial secreted acid phosphatase (SAPM) gene, where the promoter or the promoter fragment is sufficient to control expression of a nucleotide sequence of interest and is inducible under low-pH conditions and where the promoter or the promoter fragment hybridise to a sapM promoter, for example a Mycobacterium tuberculosis sapM promoter, a M bovis sapM promoter, a M arinum sapM promoter, and cavium sapM promoter or a M marinum sapM promoter, each comprising a sequence of 500 bp, under high stringency hybridisation conditions. The invention may be useful for the production of compounds with an antibacterial or fungicide activity or for the production of a vaccine against Mycobacterium species comprising a mycobacterial secreted acid phosphatase (SAPM) or an antibody specific for a mycobacterial secreted acid phosphatase. The DNA sequence, methods, compounds, vaccine and compositions are useful in diagnosing, treating or preventing a compositions are useful in diagnosing, treating or preventing a pathogenic mycobacterial disease or fungal infection. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                           ö
regulatory element, a cell comprising a recombinant vector, a method for producing an E. faecalis polypeptide, an isolated nucleic acid comprising a sequence not given in the specification, a recombinant vector comprising the nucleic acid and a cell comprising the recombinant vector. The polynucleotides can be used to detect the presence of E. faecalis in a sample. The sequences are useful for preparing a composition for diagnosing or treating Enterococcus faecalis infection. This sequence represents an E. faecalis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a lysophosphatidic acid acetyltransferase (LPAAT) isoenzyme. The nucleic acid may be used to create transgenic plants which encode LPAAT at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found. This would have the effect of altering the level of specific triacylglycerols in those cells, for e.g. overexpression of an LPAAT similar to the maize LPAAT will result in higher oil content in the seed, stem and leaf. LPAAT chimeric genes may be used for co-suppression of genes encoding LPAAT. The polymuclostides may also be used as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to those genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid fragment encoding a lysophosphatidic acid acetyltransferase (LPAAT) isozyme, useful for creating transgenic plants which encode LPAAT at higher or lower levels than normal.
                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for enhancing an immune response to endogenous antigens comprising administering a B2L viral envelope protein of a Parapox virus to a subject. The method is used to enhance an immune response to endogenous antigens, associated with a cell proliferative disorder or infectious pathogens. The method is used to treat a patient having a cell proliferative disorder, or to elicit an immune or inflammatory response in a subject. The method is also used for identifying compounds with the ability to modify a subject's immune and/or inflammatory response. The method is used to treat cancer and can enhance a subject's immune response to non-administered antigens. This sequence represents a B2L protein of the invention. Note: The specification states that this sequence is encoded by the DNA displayed in SEQ ID NO:2, but this does not appear to be the case.
                                                                                                                                                                                                                                                                                                                                                                                                                                B2L; viral envelope protein; Parapox virus; cell proliferative disorder; immune response; inflammatory response; cancer; immunostimulant; immunosuppressive; antiinflammatory; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Enhancing an immune response to endogenous antigens e.g. for treating cancer, comprises administering a B2L Parapox viral envelope protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The method is used to enhance an immune response to endogenous antigens, associated with a cell proliferative disorder or infectious pathogens. The method is used to treat a patient having a cell proliferative disorder, or to elicit an immune or inflammatory response in a subject. The method is also used for reflammatory response. The method is used to treat and can identifying compounds with the ability to modify a subject's immune and/or inflammatory response. The method is used to treat cancer and can enhance a subject's immune response to non-administered antigens. This

This invention relates to a novel composition for enhancing an immune response to an antigen comprising administering to a subject mammal a B2L response to an antigen comprising administering to a subject mammal a B2L viral servalope protein of a Parapox virus and an antigen, and detecting a resultant enhanced, specific immune response to the antigen. The B2L protein is unassociated with the B2L protein in the virus, and acts as adjuvant to cenhance the immune response to the antigen. The invention also discloses a pharmaceutical composition for enhancing an immune response to an antigen, the composition preferably comprises the PB30 protein of a parapox virus or the nucleic acid encoding the protein and the antigen or the nucleic acid encoding the protein and the antigen or the nucleic acid encoding the protein of the invention composition and the antigen or the nucleic acid encoding the protein is PP30 protein of a crivity and may be used as a vaccine. The protein is PP30 protein of a crivity and may be used as a vaccine. The protein is PP30 protein of a crimune response to an antigen for treating or preventing tumour, flu, tuberculosis, or respiratory syncytial virus, anthrax or HIV infections. The present sequence represente the parapoxvirus B2L viral envelope con the parapox virus protein from Parapox virus strain D1701 used to create the composition of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Enhancing an immune response to an antigen by administering to a subject mammal a B2L viral envelope protein of a Parapox virus and an antigen and detecting a resultant enhanced, specific immune response to the antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immune response; B2L viral envelope protein; Parapox virus; adjuvant; PP30 protein; virucide; cytostatic; tuberculostatic; virucide; anti-HIV; vaccine; tumour; flu; tuberculosis; respiratory syncytial virus; anthrax; HIV infection; virus.
